Professional Summary

System Development Engineer with **2.5+ years** of experience building **scalable distributed** systems at **Amazon** and **Zoho**. Experienced in **microservice architecture**, **event-driven systems**, and **serverless AWS (Lambda, DynamoDB, SQS/SNS, Bedrock)**. Builds LLM-powered multi-agent systems with LangGraph and MCP. Track record of cutting **latency by 50%** through microservice consolidation, **reducing build times from 21 minutes to 1**, and securing **100M+** documents with centralized encryption..

Work Experience

System Development Engineer *April 2026 – Present*
Amazon *Chennai, Tamil Nadu - Onsite*

- Built a shared team memory system as an **MCP** server on **AWS Lambda**, backed by **Amazon Bedrock Knowledge Bases** for **semantic** storage and retrieval, and connected it to 12 engineers' coding agents. Fixes and findings are captured automatically and reused, cutting repeat issue resolution time by **30%**.
- Consolidated metrics from 5 teams into a single management dashboard. **EventBridge-scheduled Lambda** jobs pull each team's data into **S3**, which is queried through **Athena**, saving **10 hours/week** of manual reporting.
- Deprecated **4 microservices** by merging them into a single service behind API Gateway and **Lambda** with consolidated **DynamoDB** tables, cutting latency by **50%** and infrastructure cost by **25%**.
- Built an **event-driven** migration handler that consumes org-wide **SNS** events through **SQS** into **Lambda**, with **DLQ**-based retries and idempotent **DynamoDB** writes. It migrated millions of customer records with zero downstream breakages across **6 dependent services.**

Software Developer *February 2024 – April 2026*
ZOHO Corporation *Chennai, Tamil Nadu - Onsite*

- Led development of web publishing capabilities in **Zoho Show**, enabling over **200K** presentations to be converted into interactive websites within the **first 6 months** expanding audience reach by **65%** and driving user engagement growth.
- Accelerated application performance through strategic optimizations, eliminated **waterfall** loading and optimised JavaScript execution resulting in **40% faster page loads** and significantly improved overall user experience across devices
- Implemented **in-transit** encryption for Zoho Show and integrated it with **Zoho Directory**, enabling centralized key management for **30+ Zoho products**. This secured over **100 million** documents, enhanced compliance with **GDPR** and **ISO/IEC 27001**.
- Modernized the frontend tech stack by migrating to React and Vite, reducing build time from 21 minutes to just 1 minute, improving developer productivity, streamlining CI/CD workflows, and enabling faster feature rollouts

Projects

Events@Sathyabama - Full Stack Event Management System *Repository | Website | Video*

- Utilized **Django**, **MySQL** and **JWT** to develop a college-specific event management system for **17000+** students, **1000+** faculty, and administrators, enabling **real-time tracking** and streamlined event approvals and **automated notifications**
- Streamlined event management by implementing **SEO-focused SSR**, resulting in **50%** faster load times, **70%** quicker event announcements, and **60%** more **efficient approval**. Increased event participation by **45%** across campuses.
- Incorporated approval mechanisms and **single-click** applications resulting in a **150%** surge in application volume quickly.
- **Tech:** NextJS, TypeScript, Material UI, Tailwind CSS, REST APIs, JWT, Django, MySQL, RDBMS

AI Personal Travel Guide - An AI Travel Planner *Website*

- Built a multi-agent conversational travel planner with 5+ specialized agents that turns open-ended user preferences into personalized recommendations.
- Designed a 7-stage non-compensatory ranking pipeline with a 5-level preference intensity scale and hard-constraint gating, so a strong score on one attribute can't hide a poor score on something the user cares about.
- Built a wrapper on LangGraph that turns its rigid workflow into a dynamic multi-agent system with cross-agent communication. This cut redundant pipeline runs by 60% on follow-up queries.
- Reduced hallucination over long sessions by replacing raw chat history with structured trip-state memory, keeping context accurate past 30+ conversation turns.
- **Tech:** NextJS, Python, LangGraph, FastAPI, PostgreSQL, Redis, Docker, Kubernetes

Technical Skills

- **Programming Languages & DB:** Python, JavaScript, Java, C++, SQL, MySQL, MongoDB, Redis.
- **Technology & Framework:** ReactJs, NextJs, Redux, TypeScript, Django, TailwindCSS, NodeJs, GraphQL.
- **DevOps:** Docker, Kubernetes, Linux Shell, Vercel, Github Actions, Google Cloud, Microsoft Azure.
- **AWS:** Lambda, API Gateway, SQS, SNS, EventBridge, Step Functions, DynamoDB, S3, Athena, ECS/Fargate, Bedrock (KB), CloudWatch
- **AI/LLM:** LangGraph, Multi-agent systems, Memory Management, MCP, RAG, Amazon Bedrock, Azure Foundry

Education

Sathyabama Institute of Science and Technology — Chennai, Tamil Nadu
Bachelor of Engineering – Computer Science & Engineering — *Sep 2020 – April 2024*
